
Please note that this download link is a seven-zipped seven hundred thirty-three megabyte archive file. This post is very long and has been placed at the end of this article, to avoid spoiling the informative and factual introduction for other blog posts. You can view it by clicking on the "Downloads" tab at the top of this page or by scrolling to the bottom of this article. The 737NGX simulator by PMDG also includes our new 600 Series in both classic white and new colors, along with refreshed 700 Series models in current Skyteam colors, plus new 800 and 900 series aircraft reflecting Emirates' vibrant paint scheme with all their latest high-tech cabin features. The inclusion of our PBR (Physically Based Rendering) technology allows us to implement quality surfaces on the entire aircraft body, including all panels and other internal structures, which eliminates the blurring effects present in other simulators. This is game-changing for P3D pilots who want to accurately benchmark their different liveries and textures. PBR also gives us an opportunity to give the latest 2D-accelerated MSAA support for MS Windows 10 users, delivering unprecedented image quality even during high frame rate transitions. On this post I'm excited to share that we will be releasing version 1.30 for both FSX and P3D. The FSX version features the new 600 and 700 series, along with updated 800 and 900 series models. We wanted to thank our loyal fans for such an incredible response to the NGX, which we consider to be one of our most important titles. We will also be able to offer users the ability to purchase individual aircraft within the various versions of our 737NGX product. PMDG has also worked to ensure that our transparencies are accurate through the use of leading-edge technology, including the addition of high-end proxy objects for FSX to accurately reflect the transparency effects seen in P3D. This allows us to represent light shining through windows and other exterior objects more accurately than ever before. We have also added the ability to dynamically control all of our interior lights via any 3rd party aircraft system interface. PMDG is proud to announce that we have developed a new automated installer for Microsoft Flight Simulator X and Lockheed Martin Prepar3D v4! It will automatically install updates, along with all optional content, including aircraft. This is a real world Boeing 737-800NGX, which has been modified with a tail number of N606MG. This is the same model that we have used for our full walk around video that is included in the NGX product. Our new NGX product contains over 600 models across 7 different models, each featuring over 60 unique liveries and variants. These include classic white and emerald green skins, as well as paint schemes based on the latest Emirates colors. The individual models are also trimmed with high-end virtual materials including PBR textures for accurate reflections. All products are compatible with FSX, FS2004 if using the Community Edition, FSX Acceleration Library (FSL) 1.
